SUMMARY

Frontend-focused Full-Stack Software Engineer with **4+ years** of remote experience building scalable web applications using **React**, **TypeScript**, **Node.js**, and **AWS**, leveraging **agentic engineering** to deliver production-ready software efficiently.

EXPERIENCE

Software Engineer

Transoft Solutions

October 2024 – Present, Brisbane, Australia (Remote)

- Built and maintained **10+ real-time dashboards** for a traffic analytics platform serving **~2,000 government and private-sector sites**.
- Fixed a **systemic data accuracy bug** across **5+ dashboards**, restoring reliable traffic reporting platform-wide.
- Revamped the **alert management system** with **multi-site**, **multi-timezone**, and configurable notification support for real-time safety monitoring.
- Reduced **network requests by up to 80%** by loading only selected camera data and implementing caching.
- Built and maintained **serverless backend infrastructure** using **AWS SAM**, **Lambda**, **CloudFormation**, and **DynamoDB**.
- Integrated **agentic engineering workflows** with **Claude Code** and **OpenAI Codex**, authoring **technical specifications**, orchestrating **AI-assisted implementation**, and shipping **production-ready software**.

Software Developer

Advanced Mobility Analytics Group

January 2022 – September 2024, Brisbane, Australia (Remote)

- Built **conflict heatmaps** and **video clip features** from scratch with advanced filtering, CSV export, and map visualization.
- Developed **camera calibration tooling** with angle-shift detection, trajectory visualization, and undo/redo workflows.
- Built **speed analytics dashboards** and end-to-end **data export APIs** using **Lambda**, **DynamoDB**, and **AWS SAM**.
- Migrated the platform from **Moment.js** to **date-fns**, modernizing frontend and API code.

PROJECT

NahidArbX: Real-Time Value-Bet Detection Platform

Personal Project / Self-Directed • github.com/nahidhasan830/nahidArbX • September 2025 – Present

- Designed a **4-phase processing pipeline** for fixture ingestion, event matching, market normalization, and value-bet detection against Pinnacle sharp prices.
- Built the platform through an **agentic engineering workflow**, authoring system architecture and specifications while directing **Claude Code** and **OpenAI Codex** throughout implementation.
- Architected a **2-process TypeScript system** using **Next.js**, **PostgreSQL**, **Drizzle ORM**, and a standalone detection engine.
- Integrated **4+ betting data providers** including Pinnacle, NineWickets, Velki, and SABA, with normalized fixtures, markets, odds, event matching, and value-bet calculations.
- Built an **ML training pipeline** using **LightGBM**, **Cloud SQL**, and **Cloud Run Jobs** for automated model retraining.

EDUCATION

B.Sc. in Industrial and Production Engineering

Jashore University of Science and Technology • Jashore, Khulna, Bangladesh • 2024

SKILLS

Languages: TypeScript, JavaScript, HTML, CSS

Frontend: React, Next.js, Redux, Material UI, Tailwind CSS, Mapbox, Google Maps, ApexCharts

Backend & Cloud: Node.js, REST APIs, AWS Lambda, AWS SAM, CloudFormation, DynamoDB, PostgreSQL, Drizzle ORM, Google Cloud SQL, Cloud Run Jobs

AI Engineering: Claude Code, OpenAI Codex, Cursor, Command Code, Kiro, Grok Build, Google Antigravity, OpenCode

Tools: Git, Jira, Agile/Scrum
